Products and Processes

alliaverre® Flat Glass

is a thermally toughened (tempered) soda-lime float glass.

Due to its mechanical and thermal properties, processed toughened float glass is ideally used as a component for household appliances, commercial refrigeration appliances and many other industrial areas.

Different shapes, sizes, edge and corner work round off the picture and give the product an individual appearance.

Glass fabrication

Inbound Raw Glass → Cut → Grind → Drill → Print → Temper or Crystallization → Outbound Glass

Our competencies

- Various glass types, e.g. clear float, tinted, mirror and heat reflective coated, extra white and Stopsol® flat glass
- Standard thicknesses from 3 up to 8 mm (10 mm on special request)
- Numerous shapes, edge and corner work, holes, cut outs, bent glass
- Countless colors & designs
- Integrated functionalities, e.g. warming function, easier cleaning surfaces, heat reflection
- Assembly work

Quality

Quality stars with basic glass:

- alliaverre®Flat Glass products are of very high quality and tailored to customers' needs.
- We understand product quality and offer reliable service and environmental friendliness to be crucial success factors in our business.
- To ensure these high quality requirements, numerous measures are taken in product development along the entire supply chain.
- All our products meet all relevant national and international standards and regulations (details on request).
